PROFESSIONAL SUMMARY

Frontend engineer who builds product surfaces and the design systems behind them. Led the redesign of StackHawk's Getting Started page into a dashboard, iterating directly with the CEO - weekly page visit rate rose from ~10% to ~32% after launch. Built a 20+ component Storybook design system and drove its adoption across the engineering team, and was main contributor on the full-application migration from Semantic UI and styled-components to Tailwind CSS. Ships empty, loading, and skeleton states into every new surface as standard practice. 5 years of production React and TypeScript, including cross-stack work on protobuf schemas and API contracts.

PROJECTS

Crestline UI | @crestline/ui - npm.im/@crestline/ui | github.com/ValentinaPanic/crestline

Published React component library (Button, TextField, Badge, Indicator, Spinner, Card) with a Storybook showcase and accessibility linting. Built with CSS Modules and a custom design token system, dual ESM/CJS output via tsup, and full TypeScript types.

React, TypeScript, CSS Modules, tsup, Storybook

PrepCode - prep-code.vercel.app | github.com/ValentinaPanic/PrepCode

Interview prep app covering system design questions, interactive quizzes, and timed component coding challenges. Focused on the gaps I hit in my own interviews: API contracts, pagination patterns, and system design reasoning.

React, TypeScript, Tailwind CSS, Anthropic API

WORK EXPERIENCE

StackHawk

Aug 2022 - May 2026

Front End Engineer

Remote

- Led the Daily Active Users initiative - redesigned the Getting Started page into a dashboard with "Things to Do Today" (3 prioritized actions), Top 5 Vulnerabilities, and an Achievements section. Iterated with CEO feedback (reduced from 5 actions to 3). Weekly page visit rate rose from ~10% to ~32% after launch.
- Worked closely with the design team on new features and pages, building empty states, loading states, and skeletons into every new feature and page as standard practice
- Built custom D3.js data visualization (security metrics donut chart) used by enterprise customers for vulnerability reporting
- Built 20+ reusable components with Storybook documentation for the internal design system, standardizing UI patterns and accelerating new feature delivery
- Drove component adoption through code review and pairing with engineers across the team
- Main contributor on the full-application migration from Semantic UI and styled-components to Tailwind CSS (working alongside the engineer leading the effort), establishing styling patterns adopted across the engineering team
- Migrated state management from Redux to Nanostores across feature areas, and contributed to the React 19 upgrade, resolving breaking changes across consuming components
- Shipped features across Attack Surface Management, API Discovery, GitHub integration flows, and application management interfaces
- Developed integration UIs connecting 6+ third-party tools (Snyk, Jira, Slack, Vanta, Azure DevOps, Bitbucket), expanding platform reach for enterprise accounts
- Occasionally contributed to backend tickets - protobuf schema updates and API contract changes - using AI assistance to navigate unfamiliar services and ship cross-stack changes
- Implemented a handful of GraphQL API tickets on StackHawk's marketing site
- Authored custom Cursor and Claude rules and reusable prompts that the engineering team adopted

StackHawk

Apr 2021 - Aug 2022

Junior Front End Engineer

Remote

- Shipped UI features in React, TypeScript, and Semantic UI for an application security platform, ramping to independent feature delivery within 6 months

El Chingon Mexican Bistro

Dec 2013 - Jan 2020

General Manager

Denver, CO

- Managed a 20-person team and 100-seat restaurant operations

SKILLS

Frontend: JavaScript, TypeScript, React, HTML/CSS, Tailwind CSS, styled-components, Nanostores, Redux, React Context, D3.js, Storybook, Vite, Webpack, Next.js (personal projects), Framer Motion (personal projects)

Cross-Stack: REST APIs, GraphQL, protobuf / gRPC schemas, API contracts

Testing & Quality: Jest, Playwright, code review, accessibility (WCAG), responsive design

Analytics: FullStory (product analytics, feature instrumentation)

Tools & Practices: Git/GitHub, CI/CD, Figma, Jira, Cursor, Claude, AI-assisted development, Agile/Scrum, component architecture, design systems

EDUCATION

Complete Node.js Developer Zero To Mastery, Udemy — in progress, 2026

Full-Stack Software Engineering Program Flatiron School — 2020 - 2021

Bachelor in Management (cum laude) University of Novi Sad, Serbia — 2006 - 2012
